

# Financial Life Cycle Education Corp

*We work with educators and organizations to equip all students with the mathematical and financial skills and understanding necessary to navigate their financial life cycle and meet and exceed state requirements in mathematics.*

**Math that makes sense:** “When am I ever going to need this?” Our relevant content, designed by experienced educators who understand the challenges of the modern math classroom, puts an end to that age-old question. Furthermore, our student-centered, collaborative approach increases interest and engagement.

**Math that matters:** With content presented in its native financial context to foster life skills every student will need, FiCycle ushers in the next generation of real-world learning. Our integration of math and personal finance instruction enhances equitable access to key skills for lifelong success.

**Math that makes a difference:** Our research-backed approach demonstrates the efficacy of integrating math and finance instruction. From there, our standards-aligned, rigorous math curriculum ensures students can not only grasp the essential financial concepts but succeed in using them.
