Check for Understanding 1

Required Materials: Throughout this activity you may use any FiCycle LOGs you like.

Part I: Match each expression with the equivalent expression.

- | | |
|------------------------------------|------------------------------|
| 1. $\text{LOG}(A) + \text{LOG}(B)$ | a. $\text{LOG } A/B$ |
| 2. $\text{LOG}(A) - \text{LOG}(B)$ | b. 0 |
| 3. $B \bullet \text{LOG } A$ | c. $\text{LOG } A \bullet B$ |
| 4. $\text{LOG } 1$ | d. $\text{LOG } A^B$ |

Part II: Basic Exercises. Simplify each expression to a single LOG of a number.

- | | |
|--|---|
| 5. $\text{LOG } 5 + \text{LOG } 4 = \text{LOG } 20$ | 9. $\text{LOG } 30 - \text{LOG } 30 = \text{LOG } 1 = 0$ |
| 6. $\text{LOG } \frac{1}{2} + \text{LOG } \frac{3}{4} = \text{LOG } \frac{3}{8}$ | 10. $5 \bullet \text{LOG } 2 = \text{LOG } 2^5 = \text{LOG } 32$ |
| 7. $\text{LOG } 10 - \text{LOG } 5 = \text{LOG } 2$ | 11. $2 \bullet \text{LOG } 8 = \text{LOG } 8^2 = \text{LOG } 64$ |
| 8. $\text{LOG } 100 - \text{LOG } 5 = \text{LOG } 20$ | 12. $3 \bullet \text{LOG } 5 = \text{LOG } 5^3 = \text{LOG } 125$ |

Part III: Express each single LOG as a sum or difference of LOGs.

- | | |
|---|---|
| 13. $\text{LOG } (5 \bullet 10) = \text{LOG } \underline{5} + \text{LOG } \underline{10}$ | 16. $\text{LOG } \frac{16}{4} = \text{LOG } \underline{16} - \text{LOG } \underline{4}$ |
| 14. $\text{LOG } 8x = \text{LOG } \underline{8} + \text{LOG } \underline{x}$ | 17. $\text{LOG } \frac{x}{4} = \text{LOG } \underline{x} - \text{LOG } \underline{4}$ |
| 15. $\text{LOG } xy = \text{LOG } \underline{x} + \text{LOG } \underline{y}$ | 18. $\text{LOG } \frac{x}{y} = \text{LOG } \underline{x} - \text{LOG } \underline{y}$ |

Part IV: Express each LOG as a product.

$$19. \text{LOG } x^2 = 2 \text{ LOG } x$$

$$20. \text{LOG } 5^x = x \text{ LOG } 5$$

$$21. \text{LOG } x^z = z \text{ LOG } x$$

Part V: These questions are a little harder and may require you to use findings from multiple lessons.

$$22. \text{LOG } x^2 + \text{LOG } x^{10} = \text{LOG } x^{12}$$

$$28. 2 \cdot \text{LOG } 3 + 4 \cdot \text{LOG } 2 = \frac{\text{LOG } 3^2 + \text{LOG } 2^4}{\text{LOG } 9 + \text{LOG } 16} \\ \text{LOG } (9 \cdot 16)$$

$$23. \text{LOG } (2x) = \text{LOG } 2 + \text{LOG } x$$

$$29. 20 \cdot \text{LOG } 2 - 10 \cdot \text{LOG } 2 = \frac{\text{LOG } 2^{20} - \text{LOG } 2^{10}}{\text{LOG } 2^{10}}$$

$$24. \text{LOG } 10 = \text{LOG } 2 + \text{LOG } 5$$

$$30. \frac{1}{4} \cdot \text{LOG } 16 = \frac{\text{LOG } 16^{1/4}}{\text{LOG } \sqrt[4]{16}} \\ \text{LOG } 2$$

$$25. \text{LOG } 10 = \text{LOG } 100 - \text{LOG } 10$$

$$31. \frac{1}{2} \cdot \text{LOG } 16 = \frac{\text{LOG } 16^{1/2}}{\text{LOG } \sqrt{16}} \\ \text{LOG } 4$$

$$26. \text{LOG } \left(\frac{Q}{7}\right) = \text{LOG } Q - \text{LOG } 7$$

$$32. 5,434 \cdot \text{LOG } 1 + 3\pi \cdot \text{LOG } 1 = 0$$

$$27. 6 \cdot \text{LOG } 2 + 4 \cdot \text{LOG } 2 = \frac{\text{LOG } 2^6 + \text{LOG } 2^4}{\text{LOG } 2^{10}}$$

$$33. \text{LOG } 1 \cdot \left(\sum_{n=1}^{100} e^{n+1} \cdot 27\pi n\right) = 0$$

Part VI: Using the LOG rules, break apart each single LOG into a sum, product, and/or difference of as many different LOGS as possible.

$$34. \text{LOG } \frac{2x}{7y} = \frac{\text{LOG } 2x - \text{LOG } 7y}{(\text{LOG } 7 + \text{LOG } x) - (\text{LOG } 7 + \text{LOG } y)} \\ \text{LOG } 2 + \text{LOG } x - \text{LOG } 7 - \text{LOG } y$$

$$36. \text{LOG } \left(\frac{8x^3}{9y}\right)^4 = \frac{4 \cdot \text{LOG } \left(\frac{8x^3}{9y}\right)}{4 \cdot (\text{LOG } 8x^3 - \text{LOG } 9y)} \\ \frac{4 \cdot (\text{LOG } 8 + \text{LOG } x^3) - 4 \cdot (\text{LOG } 9 + \text{LOG } y)}{4 \cdot (\text{LOG } 8 + 3 \text{LOG } x) - 4 \cdot (\text{LOG } 9 + \text{LOG } y)} \\ 4 \text{LOG } 8 + 12 \text{LOG } x - 4 \text{LOG } 9 - 4 \text{LOG } y$$

$$35. \text{LOG } \left(\frac{5x}{3y}\right)^4 = \frac{4 \cdot \text{LOG } \frac{5x}{3y}}{4 (\text{LOG } 5x - \text{LOG } 3y)} \\ \frac{4 (\text{LOG } 5x) - 4 (\text{LOG } 3y)}{4 (\text{LOG } 5 + \text{LOG } x) - 4 (\text{LOG } 3 + \text{LOG } y)} \\ 4 \text{LOG } 5 + 4 \text{LOG } x - 4 \text{LOG } 3 - 4 \text{LOG } y$$
